83% of Kaiser Permanente members* are now screened for colorectal cancer from 2000 to 2015. From 2000 to 2015, 52% fewer deaths from colorectal cancer and 26% fewer cases of colorectal cancer were reported in the N Cal region, screened by fecal immunochemical test (FIT), colonoscopy, or sigmoidoscopy, compared with fewer than two-thirds nationally (CDC); Levin and Corley et al., Gastroenterology, July 2018.
